

1. Properties dialog, GUI tab

The screenshot shows the 'mainWindow Properties' dialog box with the 'GUI' tab selected. The dialog contains various fields and controls for configuring a GUI element. Several red callout boxes highlight specific UI issues:

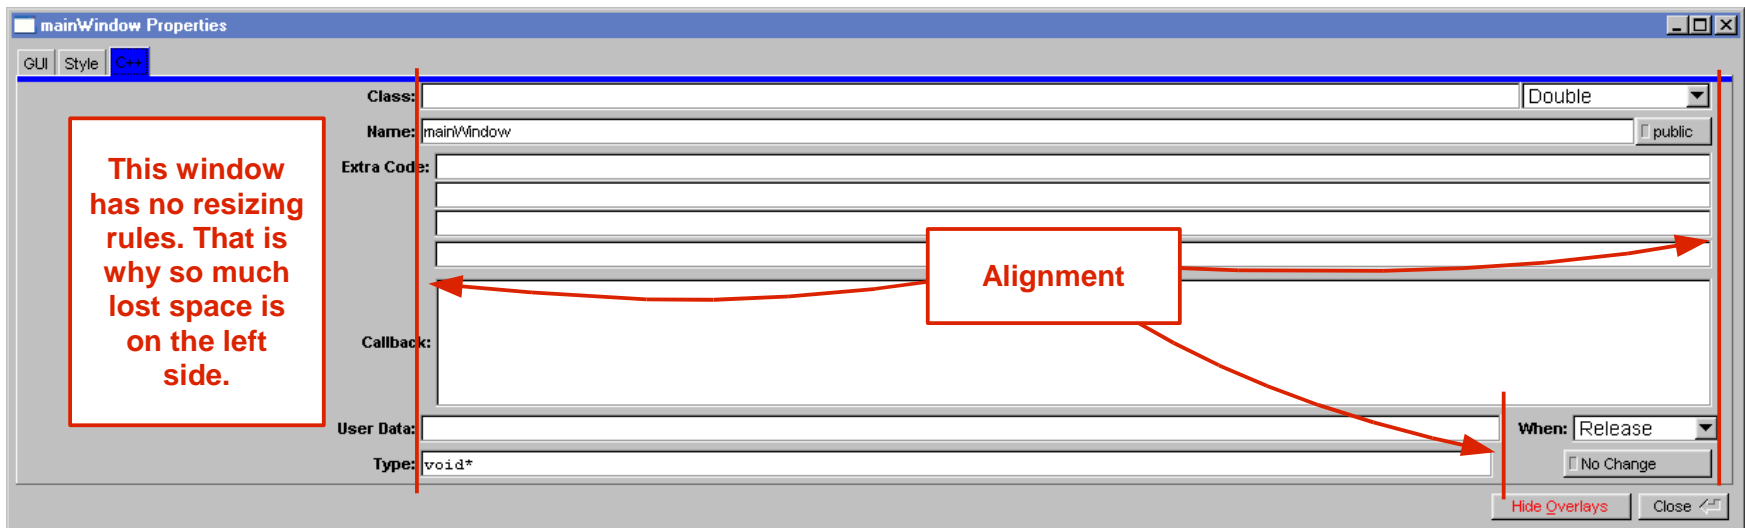

- Choice item "ENGRAVED_LABEL" does not fit:** Points to the dropdown menu showing 'ENGRAVED_LABEL', which is truncated.
- Buttons overlap input fields:** Points to the 'Browse...' buttons located below the 'Image' and 'Inactive' fields.
- Number input fields don't need to grow horizontally. The fields of the upper row could have the same width as those from the lower row.** Points to the 'X', 'Y', 'Width', and 'Height' input fields in the 'Position' section.
- Items not equally right aligned:** Points to the 'Border', 'Modal', and 'Nonmodal' checkboxes in the 'X Class' section.
- Button one pixel too tall:** Points to the 'Hide Overlays' button at the bottom right.

2. Properties dialog, Style tab

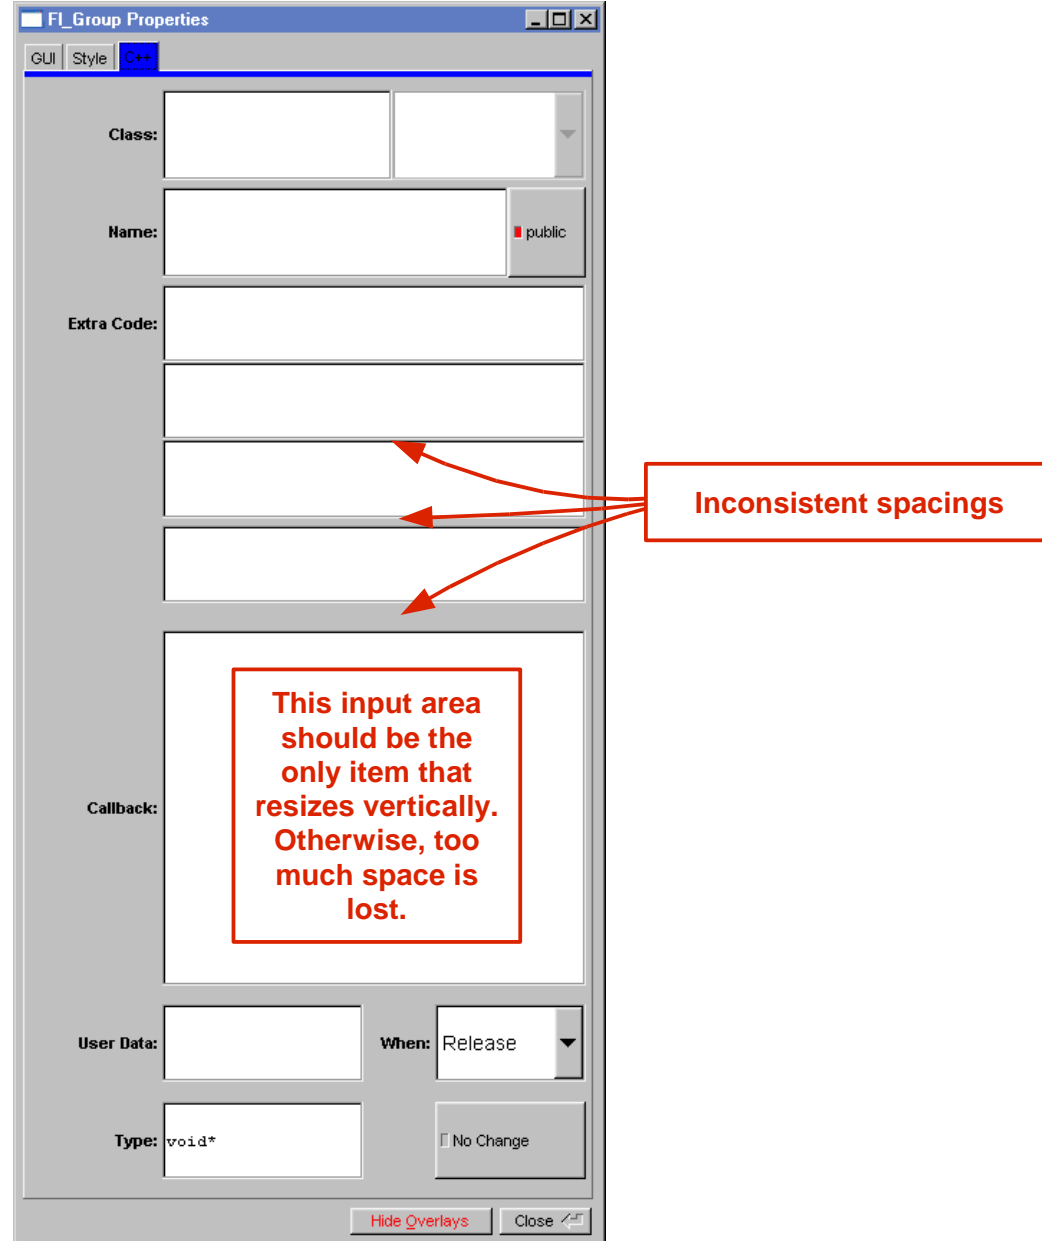

Input field overlaps choice

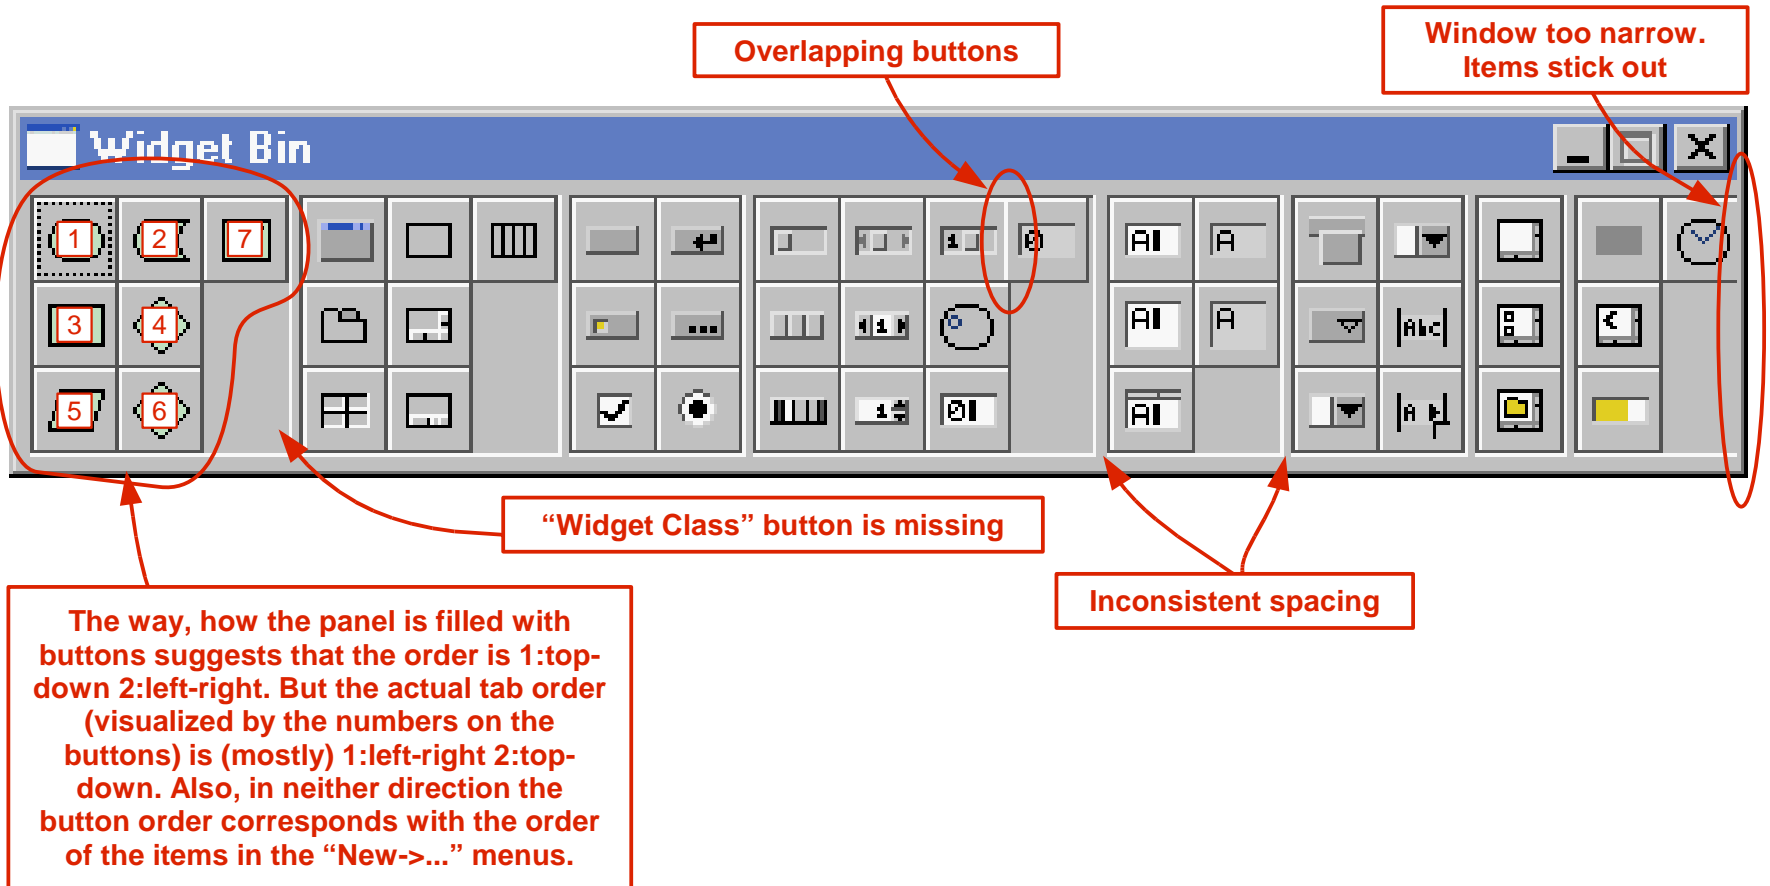

3. Properties dialog, C++ tab (horizontally)

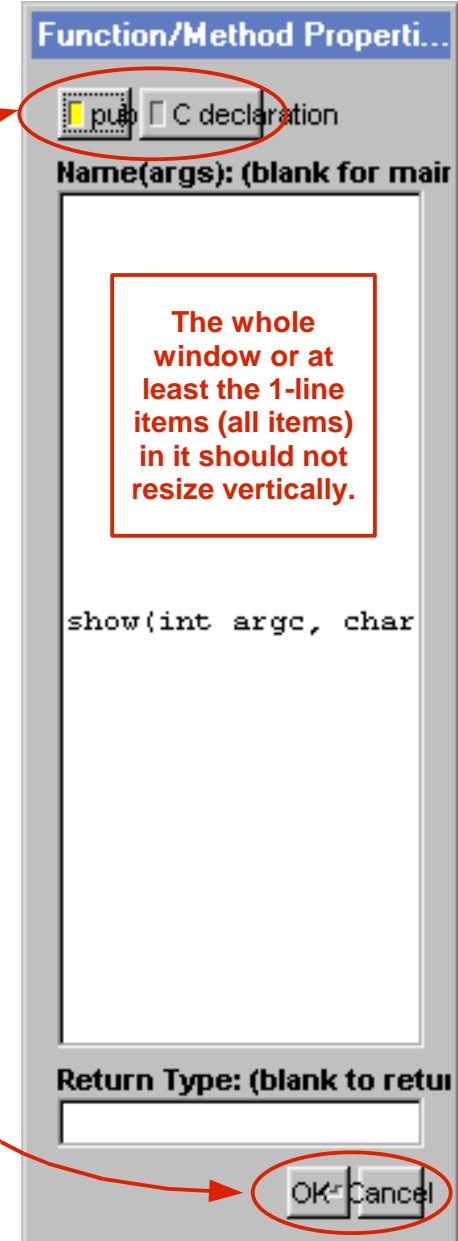

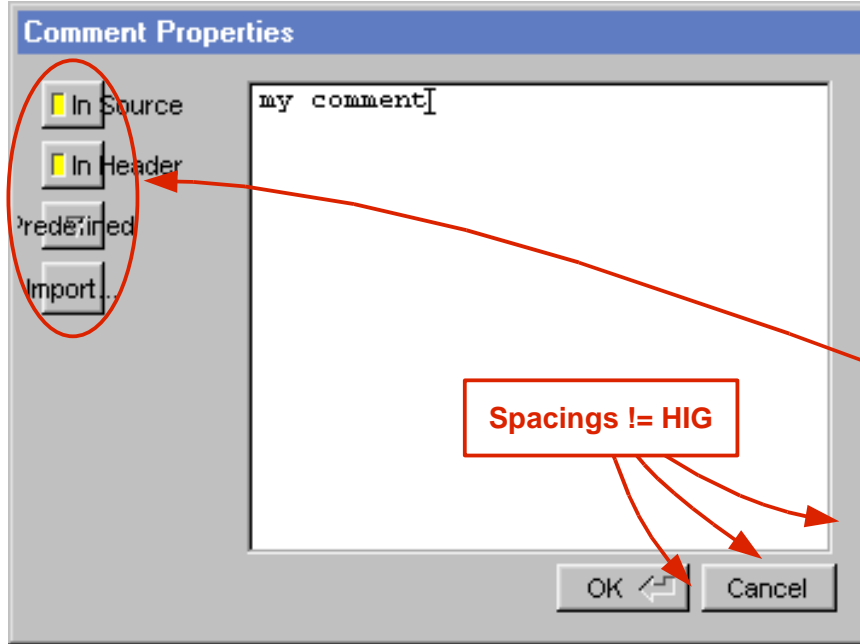

4. Properties dialog, C++ tab (vertically)

5. Widget Bin

6. The other properties dialogs

Wrong resizing

The screenshots show only two examples of the properties dialogs. But also "Declaration Properties", "Code Block Properties", "Declaration Block Properties", "Declaration Properties" and "Class Properties" have the same problems. Mostly with resizing.
